Understanding PFAS in Our Community

Polyfluoroalkyl substances (PFAS) are a group of thousands of human-made compounds often used in everyday products for their stain-resistant, fire-retardant, and non-stick properties. Unfortunately, the same properties that can make PFAS appealing to manufacturers and consumers also prevent them from breaking down naturally in the environment.

AlexRenew is actively working to identify and minimize PFAS entering our waterways. Visit [**alexrenew.com/PFAS**](https://alexrenew.com/PFAS) to learn more about AlexRenew's efforts to reduce PFAS in our community.
